

These questions are due by the end of the week. 10/10 points towards your assessment grade if you get them all right and have the math work on paper to back up your work.

You will receive zero points and fail the assignment if you are asked for your work on paper and can not produce that effort. Missing some part of the assignment will cause a loss of that percent of the overall assignment.

These weekly problems cannot be attempted a second time and the work must be turned in on time, not later in the day, not during remediation, and not the next day.

You should work on these problems throughout the week and use down time in class to work with your teams on the solution to these problems.

1.

Standard A1.2.3.3.1

A number cube with sides labeled 1 through 6 is rolled two times, and the sum of the numbers that end face up is calculated. What is the probability that the sum of the numbers is 3?

2. Solve for x . Show work.

$$3 - \frac{x}{2} = 6$$

3. The perimeters of the triangles shown are equal. Find the side lengths of both triangles.

4. Suppose you have 3 consecutive integers. The greatest of the three integers is twice as great as the sum of the first two. What are the integers?
